Dear Dept of Health.

Please excuse my typos as I am on a phone in Mexico and will not return before the 3rd.

I am a health professional I practice acupuncture I am very concerned about the use of wireless devices in schools. The concern regarding cell phones and brain tumors relates similarly to a tablet on a lap. The amount of radiation going into the groin of young children at that point of contact will cause DNA changes and mutations in sperm (proven see BC Canada warning on wireless). And ovaries (not yet proven) Our children deserve better than this. Mark my words 20 years from now the evidence being suppressed by the Telecom industry will emerge and the truth will be out. You will realize that you were stumped by the wealthiest industry in history remember the tobacco industry was still proving second hand smoke as harmless as late as the 1970s you are placing the precious Life of our children's children in harms way.

please do not cherry pick the studies. Please consider ALL the evidence before you. please look at what the E European Parliament is stating. look at the french the Australian warnings. please take a even closer look at this health concern for our children

Thank you for all you do. And thank you for over looking my many typos

Sincerely Julienne Battalia
